SEBRING — Sebring Foot Care, at 206 W. Center Ave., is now offering laser therapy.

Laser therapy has been used effectively for many years, but advances in technology have produced the next generation of laser therapy with the new MLS (Multiwave Locked System) therapy laser, which uses specific wavelengths of light to treat painful and debilitating conditions.

With laser therapy Dr. Joni Jones says she and her team of advanced laser consultants and technicians can offer relief to those suffering with both chronic and acute ailments such as back and joint pain, tendonitis, arthritis, neuropathy, disc disease and sprains and strains, post traumatic shingle pain, open wound care and much more, without the use of painful injections or potentially habit forming drugs.

"We are very excited to be able to offer this new and dramatic treatment option to patients," Dr. Jones said.

"Laser therapy is painless, with treatments usually lasting several minutes, and most patients see positive results in just one to three treatments. When a physical condition or injury affects mobility or quality of life, there is one goal: a rapid return to every-day activities. We now have the most advanced equipment on the market to deliver these results; results that include a very rapid reduction in pain, strong anti-inflammatory effect, and immediate improvement of local blood circulation.

"More and more, our patients are looking for effective treatment options that are less invasive, have no side effects, provide rapid results and speed the healing process. Laser therapy provides us with an opportunity to meet the needs of our patients, and offer the highest levels of care possible."

"We pride ourselves on staying on the leading edge of technology, and educating our patients on the various levels of care available," Jones said. "Laser therapy is the future of the chiropractic, podiatric and pain management industry, and we feel our patients deserve to have that option when choosing the best care for themselves."
